Dataset Description

This dataset supports a population health research study examining the relationship between adverse childhood experiences (ACEs), impulsivity measures, and related behavioral and demographic indicators. The dataset was deposited in the Dryad repository as part of the research publication workflow to support transparency, accessibility, and future reuse of the research data.

The dataset contains participant-level tabular data organized in structured CSV format. Variables include ACE-related indicators, impulsivity measures, demographic information, and health-related attributes used within the associated study.

Repository Information

- Repository Platform: Dryad
- Access Type: Open Access
- File Format: CSV
- Persistent Identifier: DOI-supported repository record
- Associated Resource: Linked peer-reviewed journal article
