

Curation Log

The purpose of this log is to maintain transparency of the curation workflow and provide traceable evidence of the evaluation process followed during the project.

Week 1 – Dataset and Repository Review

Activities Performed

- Accessed the Dryad repository and reviewed the dataset deposit
- Examined repository structure and DOI information
- Downloaded available dataset files
- Reviewed the associated research article
- Identified major dataset themes and variables

Initial Observations

- Dataset relates to ACEs, impulsivity, and population health
- Repository provides strong citation and DOI support
- Dataset interpretation appears connected closely to the article

Decisions Made

- Selected the dataset for CURATE(D)-based assessment
- Treated the associated article as a central curation artifact

Week 2 – Metadata and Documentation Assessment

Activities Performed

- Reviewed descriptive metadata and repository-level information
- Examined dataset structure and variable naming
- Assessed README and available documentation
- Compared article terminology with dataset variables

Key Findings

- Metadata supports discoverability and citation
- Some variables use abbreviated or unclear naming conventions
- Limited standalone explanations for certain measures

Decisions Made

- Prioritized metadata quality and documentation assessment
- Began recording documentation gaps and reuse concerns

Week 3 – Reproducibility and Transparency Review

Activities Performed

- Compared dataset variables with study findings

- Reviewed whether workflow interpretation was possible from repository materials
- Evaluated transparency of preprocessing and analytical context

Key Findings

- Dataset supports partial reproducibility
- Several workflow and transformation details are missing
- Interpretation depends heavily on the associated article

Decisions Made

- Focused reproducibility assessment on documentation transparency rather than code replication
- Documented reproducibility limitations in curation notes

Week 4 – Ethical and FAIR-Oriented Review

Activities Performed

- Reviewed ethical considerations related to ACE-related data
- Evaluated repository transparency and accessibility
- Assessed FAIR-related aspects including findability and reuse

Key Findings

- Repository supports public access and discoverability
- Sensitive behavioral data requires careful interpretation
- Stronger documentation would improve responsible reuse

Decisions Made

- Included ethical interpretation as part of curation quality
- Added metadata improvement recommendations

Week 5 – Final Assessment and Reporting

Activities Performed

- Consolidated findings from all review stages
- Finalized metadata and documentation assessments
- Organized GitHub artifacts and workflow evidence
- Developed final recommendations for transparency and reuse improvements

Final Outcomes

- Completed CURATE(D)-style curation assessment
- Identified major documentation and reproducibility limitations
- Developed recommendations for improving metadata, provenance, and reuse support
